Unlocking the power of integration with

Anaplan APIs

POLESTAR

Key Benefits

1 — Efficient access to Anaplan Data

Enables real-time data manipulation, by allowing adding/updating list items, cell-level edits, and user management, streamlining data interaction without bulk actions or file transfers.

2 — Clear insights into models and workspaces

Anaplan's Metadata APIs allow access to model insights by giving information on structure, lists, views, and facilitating automated reports and change tracking for well-informed decision-making.

3 — Developer-friendly experience

Restful APIs with JSON/CSV (and familiar structures) access simplify data integration and reduce model dependence, enabling direct data access and real-time ETL for improved efficiency.
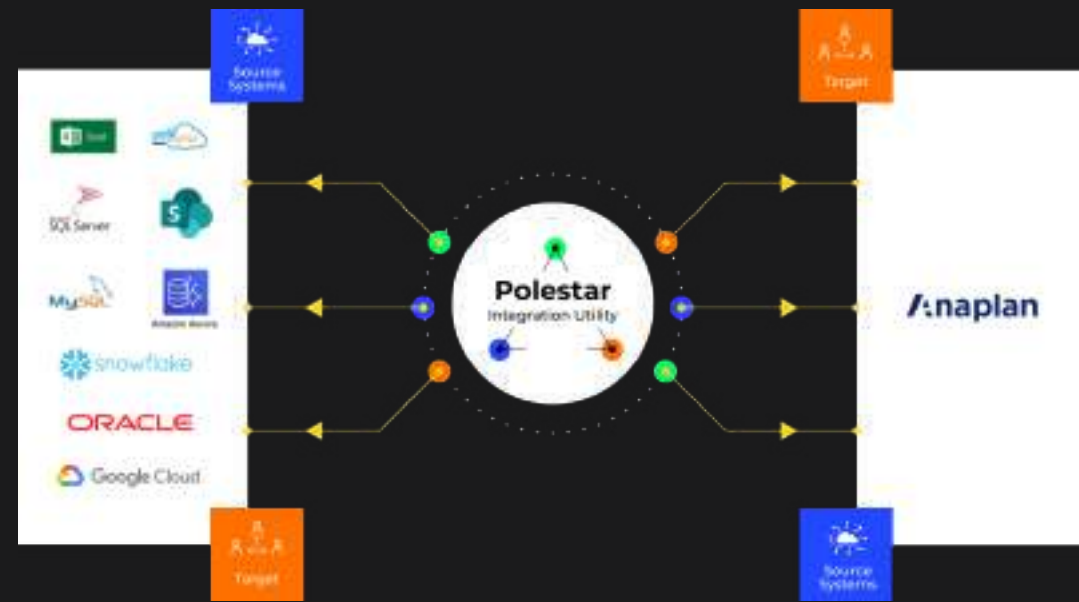

Whether you are a model builder, entrepreneur, or Anaplan user, utilizing Anaplan APIs can have a significant impact. Anaplan provides a variety of features accessible through their APIs, although grasping and utilizing them can be overwhelming for some. This datasheet aims to close the knowledge disparity and equip you with the abilities to utilize APIs. Ready to unlock the complete power of your data?

Types and Key features of Anaplan APIs

Feature Category	Bulk APIs	Transactional APIs	SCIM APIs
Primary Function	Efficiently transfer large datasets (millions of records)	Facilitate basic integrations and gain insights from model properties	Manage user provisioning and access within your Anaplan tenant
Data Actions	Import, Export, Delete (large datasets)	Read, Update, Delete (individual records)	Create, Update, Assign (user accounts)
Processing	Asynchronous (Background processing)	Synchronous (immediate response)	Synchronous (immediate response)
Key Benefits	Handles massive data volumes, Streamlines bulk data operations	Simple setup – ideal for quick integrations, Provides insights into model properties	Simplifies user administration, reduces provisioning time, Cost effective user management
Parameters	Action-specific (Import format, filters , etc.)	Action-specific (cell reference, data values, etc.)	Action-specific (user attributes, workspace assignments, etc.)

Wormhole:
Go beyond integration with Anaplan

Anaplan's APIs, though powerful, comes with limitations. Lack of version control, minimal focus on data management and being custom coding intensive for integration hinders user experience.

Polestar's Wormhole can help you overcome these limitations easily! This lightweight business user integration utility simplifies data integration with Anaplan. It eliminates the need for taking excel/CSV dumps before importing data to Anaplan.

Advantages of Polestar's Wormhole

✓ SaaS based with low maintenance

✓ Direct connectors eliminate CSV/TXT files

✓ Schedule tasks or trigger based on dependency

✓ Transforming & constraining data on the run

✓ Enterprise grade security even during data transit

✓ Bi-directional data movement

✓ Analyze logs on success or failure on UI

✓ Task notifications upon execution with status

✓ Scalability towards data size & source connectors

✓ Intuitive UI designed for non-technical users

With Wormhole, Integrate in 6 simple steps

Create Task 01 → Select Data sources 02 → Transform 03 → Save, Execute and Monitor 04 → Select Anaplan Action 05 → Add Anaplan Configuration 06

What integration tool is right for you?

Are you still unsure about which Anaplan integration tool best fits your needs ? This comparative chart offering a clear view of their capabilities – all at one place.

Attributes	REST APIs	Anaplan connect	ETL Connector	Wormhole
Description	Custom built developer	Out of Box utility from Anaplan	Readymade connector with license cost (Mulesoft, Informatica)	Utility subscription Cost
Interface	Custom build Interface as per development	No user interface	Technical user interface as ETL tools	Business User intuitive interface
Bi-directional integration	To be custom built	Yes	Yes	Yes
Integration type	Custom API Calling	Only CSV Connect	Connector	Connector
Maintenance	Maintain the code base and update for new integrations	Nil	Maintain the code and create new pipelines for new integrations	Nil, Polestar will maintain the updates
Logs and Audits	No	No	No	Proper logging and auditing with notifications on mail
UI	To be created and maintained by customer	No	Technical UI fit for IT team only	Business intuitive UI

If you want to know more about capabilities of Anaplan integration – here are few resources that might help!
